TABLE TENNIS

From Nutting Associates
—Where video game technology began . . .

Table Tennis is our new video action game. Its unique combination of special features makes it better than any coin video game yet devised—for the operator, for the player, and for the location owner.

It's housed in a handsome and contemporary cabinet that's actually a durable and attractive piece of furniture. This feature makes Table Tennis ideally suited for sophisticated lounges, country clubs and other entertainment spots.

Functionally, Table Tennis is an exciting 1-, 2- or 4-player game with an electronically controlled "ball" bouncing from side to side of the four borders of the screen and across a "net." Object of the game is just like real table tennis—to outmaneuver the other player's paddle and collect points.

A beeping sound coincides with each "bounce" of the ball, adding to the game's excitement.
